Account Enquiry Service

API definition

Changelog

The Ecobank Account Enquiry API enables secure, real-time access to customer account information across Ecobank's pan-African network. This API is designed for FinTech, corporate partners, and third-party platforms seeking to integrate account validation and status checks into their digital services.

API Overview

- **Base URL:** `https://artxuat.ecobank.com/corp-api/services/api/v2/integration/account/inquiry/`
- **Authentication:** Bearer Token (OAuth 2.0)
- **Content-Type:** `application/json`

Authentication

All requests to the Account Inquiry API must include a valid Bearer token in the `Authorization` header. Tokens are obtained through Authentication service .

```
Authorization: Bearer {access_token}
Content-Type: application/json
```

In case of errors, the API provides appropriate response codes and messages to facilitate troubleshooting.

Key Features

- **Real-Time Account Verification:** Instantly verify account details to ensure accuracy before processing transactions.
- **Enhanced Security:** Secure access through token-based authentication and encrypted data transmission.
- **Broad Integration:** Seamlessly integrate with various platforms, including mobile apps, web portals, and backend systems.
